TRIVORA

We develop an AI platform to check land-related court cases using village name and survey number.

PPG Institute of Technology, Coimbatore

Context

Studies show that around 66% of all civil cases in India are related to land or property cases.

Problem Statement

Problem

People in Tamil Nadu cannot easily check whether a land is involved in ongoing court cases using simple details like village name and survey number.

Impact

Land buyers, landowners face difficulty in purchasing and selling land while lawyers and officials has difficult to find details at a particular time.

Problem Statement/Industry

Problem Being Solved

People in Tamil Nadu struggle to check for ongoing court cases involved in specific land by just using the village name and survey number. In existing systems require more additional details like district, parties names involved in cases, case numbers and it is difficult to access the land litigation or court case details.

Supporting Data

Studies show that around 66% of all civil cases in India are related to land or property cases.

Problem Analysis

Affected Stakeholders

People includes property buyers, landowners, farmers, and real estate investors who need to verify whether a land has any ongoing court cases before purchasing or selling a land. Sometimes lawyers, property consultants, government authorities and revenue departments face difficulties in providing land information to people.

Impact on Stakeholders

Land buyers and investors may unknowingly purchase the land due to difficulty in checking ongoing court cases related to a specific survey number. Landowners and farmers face problems in selling land. Lawyers and officials may search multiple portals to find case details and making the process more time-consuming.

Root Causes

Land records and court case information are stored in separate systems without proper integration. In existing portals require multiple details such as case numbers, district, party names. There is an lack of a unified platform which using survey number and village name to get the details about the land and the court cases.

Personal/Team Connect

As a students, we are interested in using technology to solve real-life problems. Land cases are common in our society, and people often struggle to check court cases related to land and someone our team member family also face these problems. This will motivated our team to work on a digital solution to resolve the problem.

Target Customer Segments

Primary

Jobs-to-be-Done

Functional JTBD

Verify whether a land has any ongoing court cases, check the legal status of land before buying or selling and quickly access land litigation or court case details using the village name and survey number.

Emotional JTBD

Feel confident and secure before buying or selling land. Avoid stress and anxiety from potential fraud. Handle the situation by easily carrying the emotions and being mature in that situation and resolve the problem without having any issues with land.

Social JTBD

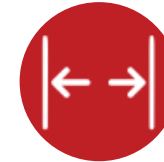

Earn family respect by making smart and fraud-free land deals. Gain community trust as a reliable landowner or seller without having any conflicts. Avoid failed transactions or litigation losses for the land.

Current Alternatives

Current Alternatives

People currently check land cases by visiting court offices and consulting lawyers or property consultants. People also asking local officials or village authorities and manually searching through different government portals for land records and court case information.

Gaps in Current Alternatives

Current methods require people to search through multiple portals or visit court and government offices, which is time-consuming and complicated and also they must know additional details like case number or party name, which many people do not know. Information is not easily accessible in one place and making the process more difficult.

Our Solution

Solution

AI-Based Land Litigation Search Portal: A digital platform where users enter village name and survey number to check if land has ongoing or past court cases, including case details and status.

Core Technologies/ Methodologies

HTML, CSS, JavaScript/React - Frontend Node.js/Python - Backend MySQL - database AI/NLP - for analyzing land and court case for web and mobile app.

Solution Design

Our Solution

AI-Based Land Litigation Search Portal: A digital platform where users enter village name and survey number to check if land has ongoing or past court cases, including case details and status.

Key Features

1. Search land cases using village name and survey number.
2. AI-based risk indicator.
3. Simple web/mobile interface.
4. Alerts for new cases.
5. Tamil and English UI and Voice Input.

Uniqueness

AI-powered system that links land survey number and village name with court case data, supporting English and Tamil text/voice input to instantly detect land disputes and show litigation status.

Solution Format:

Digital Product (Mobile/Web app)

Core Technologies/ Methodologies:

HTML, CSS, JavaScript/React - Frontend Node.js/Python - Backend MySQL - database AI/NLP - for analyzing land and court case for web and mobile app.

Solution Benefits

Functional Benefits

1. Quickly check land cases using village name and survey number. 2. View case details and status. 3. Verify legal safety before buying land. 4. Save time by avoid searches across multiple portals.

Emotional Benefits

1. Feel confident and secure before buying land. 2. Gain peace of mind by easily verifying the legal status of the land. 3. Reduced stress from quick, easy verification of land details.

Social Benefits

1. Gain trust and respect from family and community for making informed land decisions. 2. Avoid social criticism or conflicts caused by unknowingly buying the disputed land.

Macro Benefits

Improves transparency in land transactions and reduces fraud property deals. Saves time and legal costs for citizens paying for lawyer and helps build trust in digital governance and land records.
